18.00 CSS Rules :

Notes [Inline CSS method is too tiring]

```
selector {
  property: value;
}
```

use another sheet called .css to create style sheet then link with html file

```
<title> CSS Intro </title>
<link rel="stylesheet" href="abc.css">
```

abc.css

```
h2{
    color: white
    background-color: blueviolet;
}
button {
    color: rgb(197, 60, 106);
    background-color: burlywood;
}
p{
    color: darkgreen;
    background-color: lightgreen;
}
body{
    background-color: paleturquoise;
}

Css Text Properties :-

```
h1 {
    text-align : center;
    font-weight : 400;
    text-decoration : #f78120 underline
                      wavy ;

    }
a {
    text-decoration : none ;
    }
p {
    line-height : 2 ;
    }
```

Absolute Units :

Font-size :

* Px - Most commonly used Absolute unit. 1px does not necessarily equal the width of exactly one pixel.

Not recommended for responsive website

PSEUDO ELEMENTS ::

```
h2::first-letter {
    font-size: 35px;
    color: red;
}
p::first-line {
    color: dark blue
}
p::selection {
    background color: blue;
    color: Black;
}
```

The Cascade :-

The order your styles are declared in and linked to matters.

see :-

```
h1 {
    color: red;
}
h1 {
    color: purple;
}
```

Purple wins!

Specificity :-

Specificity is how the browser decides which rules to apply when multiple rules could apply to the same element.

⇒ It is a measure of how specific a given selector is.
The more specific selector 'wins'.

ID > → Specific
class > → less Specific
Element → more less specific

ID > class > Element

but Inline styles are most specific than ID's

we can Override specificity by using h1 { color: blue !important; }

Bad habit don't use.

USEFULL ASORTED CSS PROPERTIES

+ Transition
+ Position Property } Crucial
+ opacity & Alpha Channel
+ Google Fonts
+ The Full Story On The Background Propety
+ Transfooms

Important

Opacity & The alpha channel.

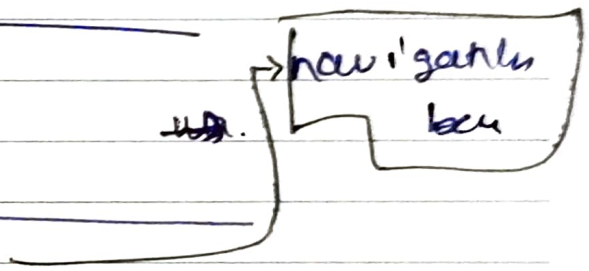

(1) rgba (0, 209, 112, 0.5)
red green blue alpha

alpha ranges from 0 – 1
0 → completly transparent
1 → not transparent

(2) opacity : 0.33;
↳ 0-1

position :-

Position : static ;
position : relative ;
top: 40px ; left: 40px;
position : absolute ;
top: 40 px ; left: 40px;
Position : -webkit - sticky;
position : sticky ;
top : 20 px;
position : fixed

Transitions :-

Property Name | Duration | TimingFunction | Delay

eg :-

transition : background-color 3s ease-in 0.5s ;

→ different Timing functions :-

1. ease-in
2. ease-out
3. ease-in-out
4. step-end
5. step-start
6. steps( )
7. cubic-bezier( )

21 WEDNESDAY February

transform:

① .transform: scale(1.5, 2);
.transform-origin: bottom-right;

↓

the pic which was in middle will shift to bottom right & element then scale 1.5, 2

② .transform: scale(0.5);

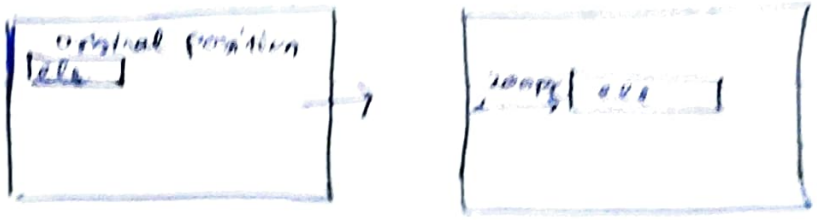

↓

shrinks

.transform: scale(2);

↓ double size of element

③ .transform: translateX(20px);

④ .transform: skew(30deg);

Box shadow :-

(offset-x) (offset-y) (blur-radius) (spread-radius) (color)

box-shadow : 2px 2px 1px ~~red~~ 2px red ;

cursor : pointer ; → cursor will change to pointer.

Google Fonts :-

add links in head section & font in css.

⇒ we have 9 images of different sizes & different height.

so css will be

```
img {
    width : 30% ;
    margin : calc (10% / 6) ; → evenly distribute 10%
}
```

Responsive Design

* As mobile devices & tablets became widely available, developers had a problem.. how do we create websites that look good on all screen sizes?

* So we typically create ONE website and stylesheet that is able to respond to different devices sizes & features.

Media Queries :-

=> Media queries allow us to modify our styles depending on particular parameters like screen width or device type.

@media (min-width: ; max-width: ;) {

}

(a) media screen and (max-width: 10rem;)
{

}

CSS

Grid

CSS Grid Layout is a two-dimensional grid system that allows you to divide a page into rows and columns, making it easy to create complex layout.

Flexbox

Flexbox is another powerful layout model in CSS, useful for creating one-dimensional layouts, either in rows or columns. It provides an efficient way to lay out, align, and distribute space among items in a container, even when their size is unknown or dynamic.
